

# Building A Simple Data Stack

## Project Brief

This project demonstrate how to implement a modern data stack, build data pipelines, machine learning and reporting capabilities using a variety of solutions.

BRIAN GWAYI  
Independent Data Lead &  
Engineer

# First Things First !!!

## Five Key Questions

- I. Where is our data? [Source](#)
- II. Where do we consolidate our data? [Storage](#)
- III. How will we get it there? [Ingestion](#)
- IV. How will we clean it up? [Transformation](#)
- V. How will we analyze it? [Reporting](#)

BRIAN GWAYI  
Independent Data Lead &  
Engineer

# Data Stack Architecture Design

Where is our data?

How will we get it there?

Where do we consolidate our data?

How do we analyze it?

# Ultimate End Goal

Data + Insights + Action  
= Actionable Insights

Data

Insight

Action

**What** happened/  
will happen?

**Why** did it happened/  
will it happen?

**What** do we do?

# Where

## is Our Data?

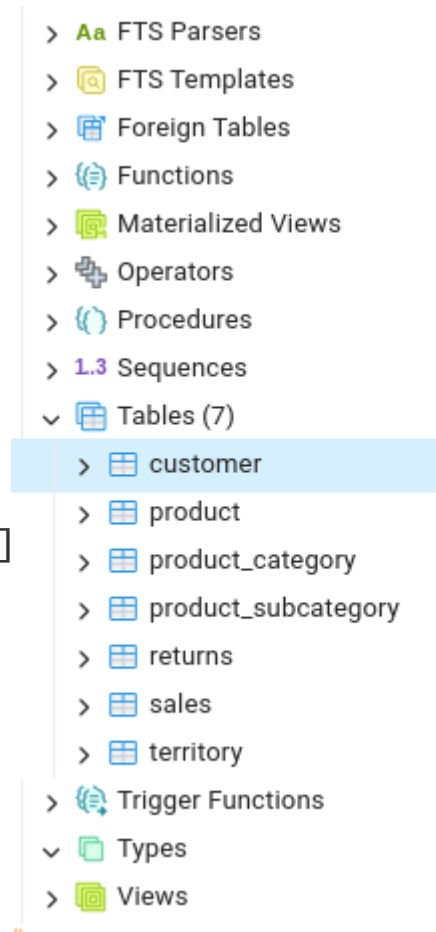

Source : PostgreSQL

Schema : Public

Database Name: adw\_db

Tables Count : 7

Tables : [customer,  
product,  
product\_category,  
return,  
sales,  
territory,  
product\_subcategory]

# How do we ingest Our Data?

Ingestion : python script  
Orchestration : Apache Airflow

## Apache Airflow Setup

### Terminal

```
$ python3 -m venv airflow-env  
$ source airflow-env/bin/activate  
$ export AIRFLOW_HOME=~/.airflow  
$ pip install apache-airflow  
$ airflow db init  
$ airflow webserver -p 8080  
$ airflow scheduler
```

# How do we ingest Our Data?

Ingestion : python script  
Orchestration : Apache Airflow

## ELT Python Script

```
pip install google-cloud-bigquery
pip install --upgrade snowflake-connector-python
```

```
# importing libraries
```

```
from airflow.decorators import dag, task
from datetime import datetime, timedelta
from google.cloud import bigquery
import pandas as pd
import psycopg2
```

## Insatiate a DAG

```
args={
    "owner": "gwayi",
    "retries": 1,
    "retry_delay": timedelta(minutes=5)
}

@dag(
    default_arguments = args
    Schedule=timedelta(minutes=30),
    start_date=datetime(2024, 7, 29),
    catchup=False,
    tags=['Team B']
)
```

# How do we ingest Our Data?

Ingestion : Python Script  
Orchestration : Apache Airflow

## Task I ( Get Tables )

```
@task()
def get_tables():
    """extract list of tables in public schema"""
    try:
        cursor.execute(
            f"""SELECT table_name
            FROM information_schema.tables
            WHERE table_schema = 'public'"""
        )
    tbls = [x[0] for x in cursor.fetchall()]
```

## Task II ( Extract\_Load )

```
@task()
def extract|load_bigquery(tbls, conn):
    """loop through tbls then extract & load"""

    client = bigquery.Client()
    job_config = bigquery.LoadJobConfig(
        write_disposition="WRITE_TRUNCATE")

    for tbl in tbls:
        table_id = f"adventureworks-431609.stg.{tbl}"
        sql = f"SELECT * FROM {tbl} WHERE
        updated_at >= {ds}"
        df = pd.read_sql(sql, conn)

        job = client.load_table_from_dataframe(
            df, table_id, job_config=job_config)
        job.result()

    get_tables = get_tables()
    extract_load = extract_load(get_tables)
```
