Project: Adventure Works

Foundation First !!! Four Key Questions

I. Where do we consolidate our data? > Storage

II. How will we get it there ? > Ingestion

III. How will we clean it up? > Transformation

IV. How will we analyze it? > Reporting

BRIAN GWAYI

Data Stack Popular Options

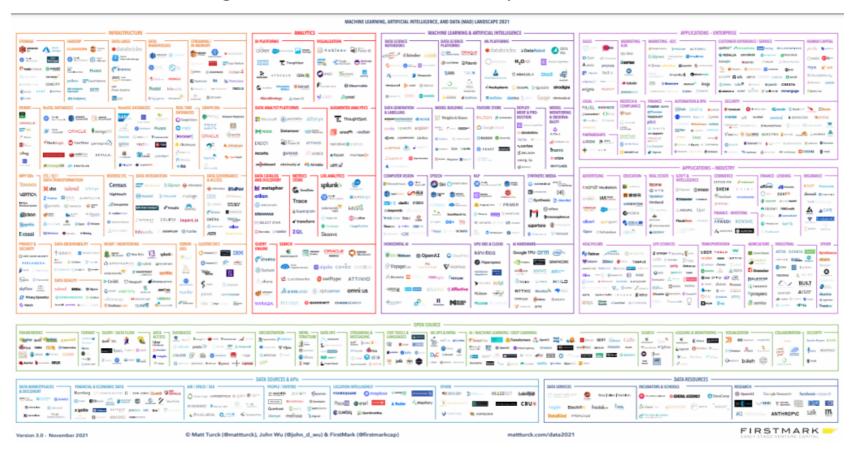

Storage > Snowflake, <u>BigQuery</u>, <u>s3</u>, Redshift Ingestion > Airbyte, <u>Airflow</u>, Fivetran Transformation > <u>dbt</u> Reporting > Tableau, Power BI, <u>Looker</u>, Superset

N/B This is not an exhaustive list of options.

BRIAN GWAYI

Modern Data Stack Ecosystem 2024

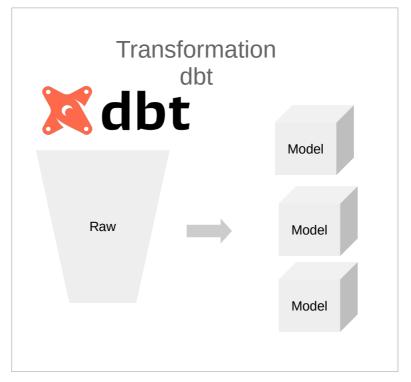

The right tools for building robust data stack architecture will be bases on Combination of budget, skillset, data sources and preferences.

Architecture Design

Ingestion Airflow Source Python

Reporting Looker

Content

Storage/Database
Setting Google BigQuery

Ingestion
Setting up Apache Airflow
Writing elt Python script
Orchestrate data pipeline

Transformation
Setting up dbt
Transformation

Reporting Connecting Looker

O1 Storage Set up BigQuery

O Ingestion Setting up Apache Airflow

- Airflow Documentation
- Production Deployment Documentation

Writing ELT Python Script

- .py Code - Extract & Load

importing libraries

```
from airflow.decorators import dag, task
from datetime import datetime, timedelta
import requests
import xmltodict
import pandas as pd
import psycopg2
from io import StringIO
```

Ingestion Setting up Apache Airflow
